VOLTAGE 95 REDUCTION RATIO 15

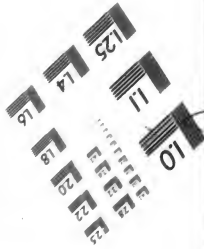

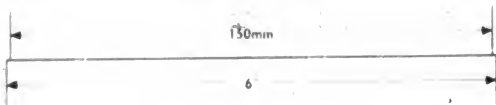

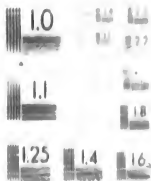

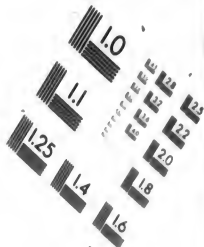

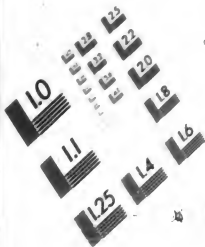

DATE 9/2/93

In order to be assured of a reproducible master roll, the American National Standards Institute recommends that film density be maintained between 0.9 and 1.3.

By microfilming these targets at the beginning and end of each microfilm roll, a densitometer reading can be made by the State Records Center. If any problem should arise the FBI will report and assist in correcting the problem.

Please print name, title, address, phone and FBI densitometer readings
